Critical backdrop Notes –

- *Price path Analysis is running commentary of the Market’s price behavior , Not a Trade Signal.*
- *Intermittent CZ’s are Short time out / Risk management for overweight position / rebalancing spots. Unless your own Portfolio objective demands.*
- *POM’s are Action points. Also at times Action points is at Main CZ’s when specifically announced Triggers.*
- *Model does not encourage Buying in between unless its false break upside or false break downside soon after POM / Main CZ Trigger and is specifically announced . Model stays with Trend POM to POM Signal.*

POM criteria for Implementation on SPX

- POM is rated from 10 to 15
- POM 14 , 15 (is Sell Signal) and 12 , 11 (is Buy Signal) both are the Actionable Area whereas POM 13 is A Neutral Signal for Risk management
- On way UP move, POM 13 signifies to STOP executing additional ‘New Buys’ that was initiated at POM 12 or POM 11 levels
- On way DOWN move, POM 13 signifies to STOP executing additional “ New Short Sells” that was initiated at POM 14 or POM 15 levels
- (Bear Markets) POM 15 is for - Net Short & POM 14 is for - Hedge Longs
- (Bull Markets) POM 15 is for -Hedge Longs & POM 14 is for - Partial Hedge
- POM 12 & 11 is for Net Long
- POM 10 is Climatic Crash low Buy Signal to add to Net long position (Rear event)

• TEXTURES – Bullish , Bearish , Neutral

In charts above we have price path of DX's noted as they are reaching its individual CZ / PEC-D Price Projections in this rally. We have identified IDX's ' with Bullish Tops . These have participated very strongly whereas the IDX with Bearish Tops & Bearish Bottoms are moving higher with –ve divergences. .

At POM 14, Bearish Top IDXs should be viewed with caution for weakness & suitable of Hedging to scale in within its own Individual CZ . These IDX 's should on reduced in position at its CZ area / PEC- D patterns. The pull back in such cases tends to be deeper in correction

The Bullish Top IDX should be continued to Hold Long position from POM 13 – Net long till POM 15 is Triggered and should be accumulated on any pull backs. These are NOT candidates for Short Sell. .

The Neutral Top IDX's are in CONSOLIDATION , with Force equally balanced. Upon building cause it should be resolved in direction of “ New pick up in force in one direction” to decide the Trajectory of Path.

Pythagoras Expansion / Contraction – (PEC) Model

- **PEC Model is a 2th Derivative Timing Tool utilized on core currencies which identifies the turning point, for Tops and Bottoms on “Short & Intermediate term” Trend in the currency market.**
- **Methodology is based on Mathematical Pattern Recognition with Symmetrical Pythagoras Triangular expansion and contraction (PEC) in concert with Price Oscillation (POM) . This has a high probability for greater accuracy on Price projections at confluence when Integrated together.**
- **Once our POM analysis is complete, it will overlay PEC. The input signals are from tracking rolling Arithmetic Numerical series of Regression utilizing Fibonacci to Identify Triangular patterns of Expansion / Contraction. Triangular pattern completes at the convergence of 2 separate Fibonacci extension levels and overlay Price Oscillation Model.**
- **Since the Currency has 2 dimensional pairs, PEC is critical to analyze with 2x2 Fibonacci steams to achieve confluence point D coinciding with POM**

PYTHAGORAS EXPANSION / CONTRACTION –(PEC) Model

The output signal of ABCD price moves preceded by a swing high or low (XA) generates projection point D, which is actionable point derived from 2 connecting triangles with convergence ratio. As with all geometric patterns, a Buy or Sell signal occurs as the pattern completes at point D
