Update - NASDAQ & Russell has met all long term weekly targets for this current rally . Russell (Small caps) continues to underperform v/s SPX. The volume on downside picked up and last week’s rally has been on endemic volume. These are time driven rolling top and good candidate to add to Net Short .

To Add to Net Short exposure in IWM, QQQ - , let the Market exhaust itself on current Bearish Momentum top or let the volume pick up on downside with “**close under price**” as Trigger . One can short counter Trend rally upon 1st failure to add previously exited positions at SPX 1670 position . We have refrained from adding any new position since then . We shall add exposure back upon failure of counter trend rally after the first break. .

Next week has positive bias on Thanks Giving week

POM criteria for Implementation on SPX

- POM is rated from 10 to 15
- POM 14 , 15 (is Sell Signal) and 12 , 11 (is Buy Signal) both are the Actionable Area whereas POM 13 is A Neutral Signal for Risk management
- On way UP move, POM 13 signifies to STOP executing additional 'New Buys' that was initiated at POM 12 or POM 11 levels
- On way DOWN move, POM 13 signifies to STOP executing additional " New Short Sells" that was initiated at POM 14 or POM 15 levels
- (Bear Markets) POM 15 is for - Net Short & POM 14 is for - Hedge Longs
- (Bull Markets) POM 15 is for -Hedge Longs & POM 14 is for - Partial Hedge
- POM 12 & 11 is for Net Long
- POM 10 is Climatic Crash low Buy Signal to add to Net long position (Rear event)

Pythagoras Expansion / Contraction – (PEC) Model

- **PEC Model is a 2th Derivative Timing Tool utilized on core currencies which identifies the turning point, for Tops and Bottoms on “Short & Intermediate term” Trend in the currency market.**
- **Methodology is based on Mathematical Pattern Recognition with Symmetrical Pythagoras Triangular expansion and contraction (PEC) in concert with Price Oscillation (POM) . This has a high probability for greater accuracy on Price projections at confluence when Integrated together.**
- **Once our POM analysis is complete, it will overlay PEC. The input signals are from tracking rolling Arithmetic Numerical series of Regression utilizing Fibonacci to Identify Triangular patterns of Expansion/ Contraction. Triangular pattern completes at the convergence of 2 separate Fibonacci extension levels and overlay Price Oscillation Model.**
- **Since the Currency has 2 dimensional pairs, PEC is critical to analyze with 2x2 Fibonacci streams to achieve confluence point D coinciding with POM**

PYTHAGORAS EXPANSION / CONTRACTION –(PEC) Model

The output signal of ABCD price moves preceded by a swing high or low (XA) generates projection point D, which is actionable point derived from 2 connecting triangles with convergence ratio. As with all geometric patterns, a Buy or Sell signal occurs as the pattern completes at point D

Buy Pattern (bullish)

Sell Pattern (bearish)
