Global Indices Overview -

SIGNALS. - Price Projection CZ , Trading / Investment Conclusions charts below

NIKKE – Japan – last Report NIKK was @ 17400, has remained flat with Bullish top target is 18700

Weakness in YEN should continue till our target 126 and it should help our Bullish Net long position in NIKK to target 18700 next ABC up . We do not believe this bull market is over and buy on dips into CZ for Net long positions to target higher levels. .

\$\$SEC–China- We have **No Position**. Currently in parabolic mode. Pull back anytime

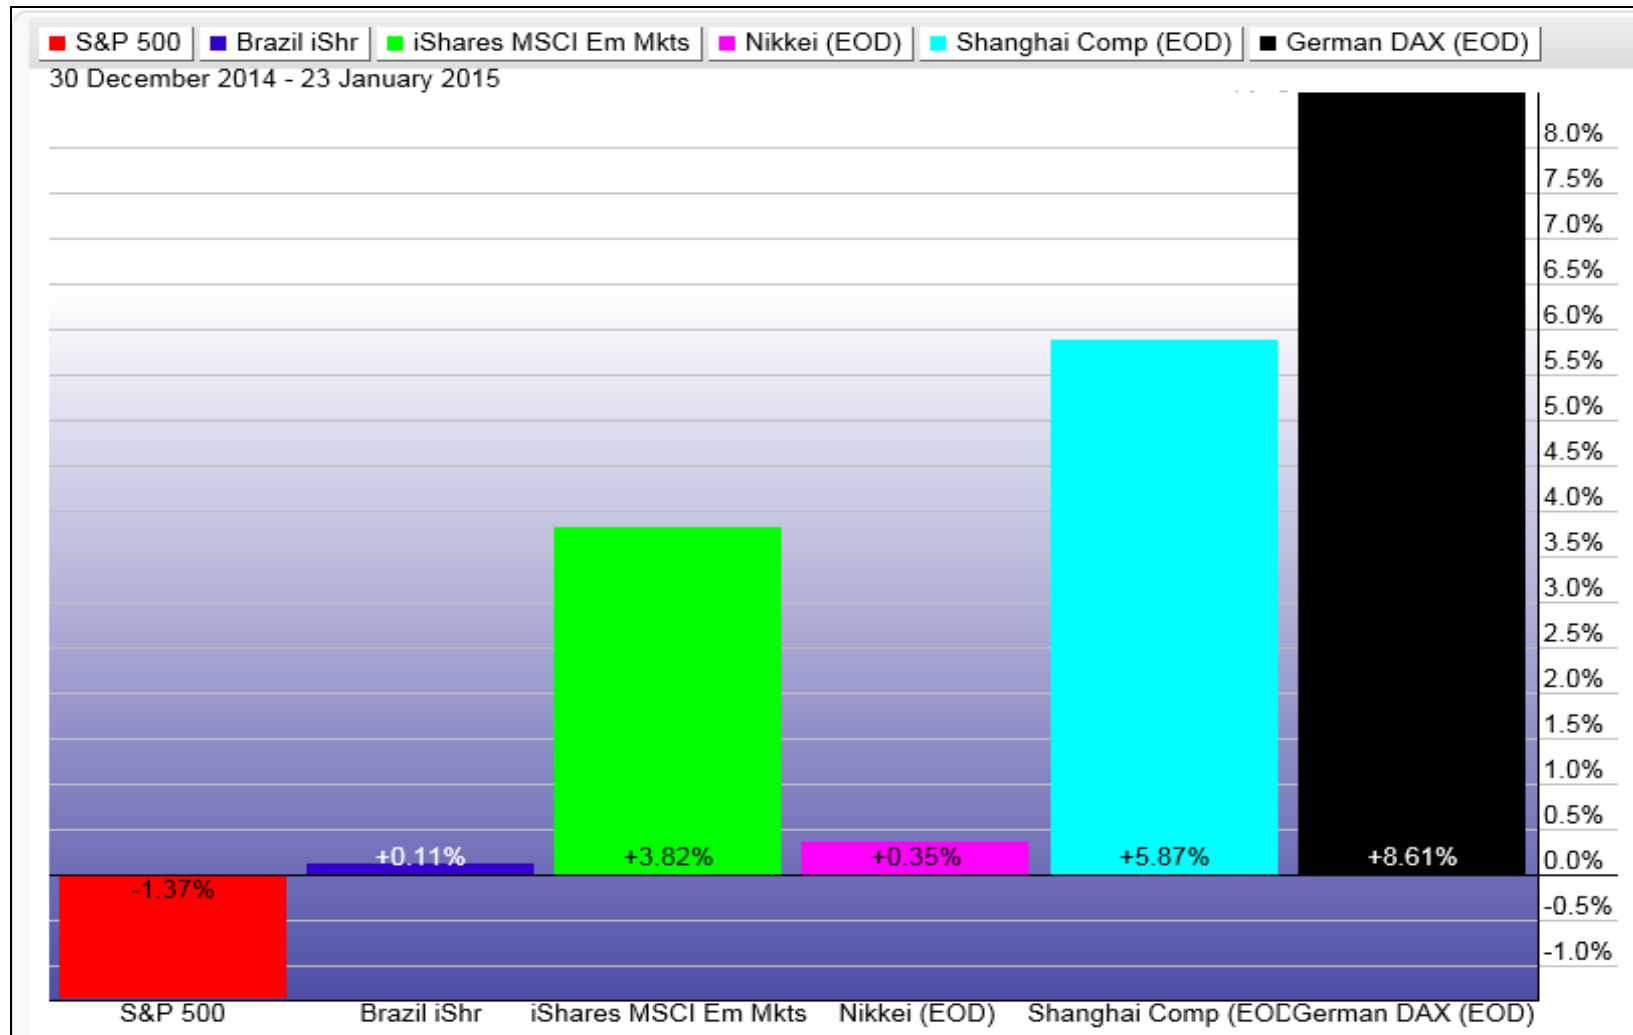

EEM – Neutral Tops and Neutral bottom – But **No Position** ,

- **BULLISH** - **NIKKE (DXJ) – ST pull back**
- **NEUTRAL** - **China (FXI) , EEM**
- **BEARISH** - **None**

Critical backdrop Notes –

- *Price path Analysis is running commentary of the Market’s price behavior , Not a Trade Signal.*
- *Intermittent CZ’s are Short time out / Risk management for overweight position / rebalancing spots. Unless your own Portfolio objective demands.*
- *POM’s are Action points. Also at times Action points is at Main CZ’s when specifically announced Triggers.*
- *Model does not encourage Buying in between unless its false break upside or false break downside soon after POM / Main CZ Trigger and is specifically announced . Model stays with Trend POM to POM Signal.*

POM criteria for Implementation on SPX

- POM is rated from 10 to 15
- POM 14 , 15 (is Sell Signal) and 12 , 11 (is Buy Signal) both are the Actionable Area whereas POM 13 is A Neutral Signal for Risk management
- On way UP move, POM 13 signifies to STOP executing additional ‘New Buys’ that was initiated at POM 12 or POM 11 levels
- On way DOWN move, POM 13 signifies to STOP executing additional “ New Short Sells” that was initiated at POM 14 or POM 15 levels
- **(Bear Markets) POM 15 is for - Net Short & POM 14 is for - Hedge Longs**
- **(Bull Markets) POM 15 is for -Hedge Longs & POM 14 is for - Partial Hedge**
- POM 12 & 11 is for Net Long
- **POM 10 is Climatic Crash low Buy Signal to add to Net long position (Rear event)**

• TEXTURES – Bullish , Bearish , Neutral

In charts above we have price path of DX's noted as they are reaching its individual CZ / PEC-D Price Projections in this rally. We have identified IDX's ' with Bullish Tops . These have participated very strongly whereas the IDX with Bearish Tops & Bearish Bottoms are moving higher with –ve divergences. .

At POM 14, Bearish Top IDXs should be viewed with caution for weakness & suitable of Hedging to scale in within its own Individual CZ . These IDX 's should on reduced in position at its CZ area / PEC- D patterns. The pull back in such cases tends to be deeper in correction

The Bullish Top IDX should be continued to Hold Long position from POM 13 – Net long till POM 15 is Triggered and should be accumulated on any pull backs. These are NOT candidates for Short Sell. .

The Neutral Top IDX's are in CONSOLIDATION , with Force equally balanced. Upon building cause it should be resolved in direction of “ New pick up in force in one direction” to decide the Trajectory of Path.

Pythagoras Expansion / Contraction – (PEC) Model

- **PEC Model is a 2th Derivative Timing Tool utilized on core currencies which identifies the turning point, for Tops and Bottoms on “Short & Intermediate term” Trend in the currency market.**
- **Methodology is based on Mathematical Pattern Recognition with Symmetrical Pythagoras Triangular expansion and contraction (PEC) in concert with Price Oscillation (POM) . This has a high probability for greater accuracy on Price projections at confluence when Integrated together.**
- **Once our POM analysis is complete, it will overlay PEC. The input signals are from tracking rolling Arithmetic Numerical series of Regression utilizing Fibonacci to Identify Triangular patterns of Expansion / Contraction. Triangular pattern completes at the convergence of 2 separate Fibonacci extension levels and overlay Price Oscillation Model.**
- **Since the Currency has 2 dimensional pairs, PEC is critical to analyze with 2x2 Fibonacci steams to achieve confluence point D coinciding with POM**

PYTHAGORAS EXPANSION / CONTRACTION –(PEC) Model

The output signal of ABCD price moves preceded by a swing high or low (XA) generates projection point D, which is actionable point derived from 2 connecting triangles with convergence ratio. As with all geometric patterns, a Buy or Sell signal occurs as the pattern completes at point D
