## Market Overview SPX- BONDS

**Back drop** – In our last Report 11/9, SPX @ 2100, we had projected the top and failure due to various Bearish indicators in NASD, RUSS, NYA and Foreign market. This followed by decline to 2020 then bounce back to 2100. ....this is exactly what has happened as indicated in our price path.

**Next** – Bullishness for **Traders**, buy the dips should continue till year end and perhaps early part of Jan 2016. SPX to target 2150. Mid of next week should start with a pullback followed by rally during the week of December 19<sup>th</sup> with surge of money flowing into mid cap.

**For Investors**, the distribution pattern on low volume is in progress under 2100 for triple Top. Target to 2150 Should be failure point early Jan 2016. This could be completion of momentum thrust Wave 1-3-5 . Positive seasonality Should hold the market up from major selling. The Bearish top formation takes slightly longer to form. The prospect of a long term top becomes a likely event for 2016 which is Ideal place to Hedge position. The target price for decline would be PEC-D 1950.

Thursday's close and Friday's rally has initiated a short term pattern recognized "pennant" or "symmetrical triangle" which is defined by two converging trendlines. That's usually a continuation pattern and increases the odds for an upside breakout. That would fit with the seasonal tendency for stocks to end the year on a high note. The 14-day RSI ended above its 50 line. Daily MACD lines look poised to turn positive. Friday's surge was the strong jobs report and increased expectation for higher rates with a big jump in bond yields.

**DXY** initiated the plunge in the dollar and big jump in gold and gold stocks. We should see another rally to 99 in USD followed by roll over to 96 in USD in 2016.

**BONDS** – We had the initial big rally from the bullish bottom as expected followed by one day nasty decline. Bonds seem to continue to want to go to higher prices despite the short term top. This does not change our Bullish picture. Previous ABC ups on TLT ended at 129 and 126 with Bullish top. These levels should be tested at some point.

# Appendix Content

- Objectives & POM /CZ / PEC –D Guidelines – Refer to detail Annexure
- POM – “ Price Oscillation Model “ Criteria
- PEC –D “ Pythagoras – Expansion & Contraction Criteria
- CZ- Confluence Zone Criteria
- TEXTURES – Bullish , Bearish , Neutral

## Critical backdrop Notes –

- *Price path Analysis is running commentary of the Market's price behavior , Not a Trade Signal.*
- *Intermittent CZ's are Short time out / Risk management for overweight position / rebalancing spots. Unless your own Portfolio objective demands.*
- *POM's are Action points. Also at times Action points is at Main CZ's when specifically announced Triggers.*
- *Model does not encourage Buying in between unless its false break upside or false break downside soon after POM / Main CZ Trigger and is specifically announced . Model stays with Trend POM to POM Signal.*

## POM criteria for Implementation on SPX

- POM is rated from 10 to 15
- POM 14 , 15 ( is Sell Signal) and 12 , 11 ( is Buy Signal ) both are the Actionable Area whereas POM 13 is A Neutral Signal for Risk management
- On way UP move, POM 13 signifies to STOP executing additional “New Buys” that was initiated at POM 12 or POM 11 levels
- On way DOWN move, POM 13 signifies to STOP executing additional “ New Short Sells” that was initiated at POM 14 or POM 15 levels
- ( Bear Markets) POM 15 is for - Net Short & POM 14 is for - Hedge Longs
- ( Bull Markets) POM 15 is for -Hedge Longs & POM 14 is for - Partial Hedge
- POM 12 & 11 is for Net Long
- POM 10 is Climatic Crash low Buy Signal to add to Net long position (Rear event)

## Pythagoras Expansion / Contraction – (PEC) Model

- PEC Model is a 2<sup>th</sup> Derivative Timing Tool utilized on core currencies which identifies the turning point, for Tops and Bottoms on “Short & Intermediate term” Trend in the currency market.
- Methodology is based on Mathematical Pattern Recognition with Symmetrical Pythagoras Triangular expansion and contraction ( PEC) in concert with Price Oscillation ( POM) . This has a high probability for greater accuracy on Price projections at confluence when Integrated together.
- Once our POM analysis is complete, it will overlay PEC. The input signals are from tracking rolling Arithmetic Numerical series of Regression utilizing Fibonacci to Identify Triangular patterns of Expansion / Contraction. Triangular pattern completes at the convergence of 2 separate Fibonacci extension levels and overlay Price Oscillation Model.
- Since the Currency has 2 dimensional pairs, PEC is critical to analyze with 2x2 Fibonacci streams to achieve confluence point D coinciding with POM

## PYTHAGORAS EXPANSION / CONTRACTION –(PEC) Model

The output signal of ABCD price moves preceded by a swing high or low (XA) generates projection point D, which is actionable point derived from 2 connecting triangles with convergence ratio. As with all geometric patterns, a Buy or Sell signal occurs as the pattern completes at point D

### Buy Pattern (bullish)

### Sell Pattern (bearish)
