## Market Overview SPX- BONDS

SPX's - POM 14 Triggered – NEUTRAL on 7/6 within CZ 2060-2065

Our projection to downside target to **PEC-D 2060** met. Energy to downside got exhausted. We may see this target re tested.

All in all, it appears that SPX still have some work to do to finish forming a base from which to launch either a bear market rally, or another leg up to high. The new high question doesn't matter to us, especially since we would look for market to fail.

Currently the TRIN came in at 1.53. Going back two years, each time when the TRIN was near this high which was a bottom. A time to worry is when the TRIN doesn't expand on a decline, which usually means the decline will continue. This is very critical reading at the end of projection ABC down 2065. Which Triggered POM 14 and covered Net short.

The Shanghai market is in a crash and will continue to crash but possibly give a bounce. It has retraced back to pivot point after putting in triangular top. It may determine the direction of U.S. stocks next week

TLT 's - POM 13 Triggered- Bullish on 5/18 with CZ 120-118.

TLT began the rally as expected but the bottom at PEC-D 116.5 is being retested. No change here, a major cycle low in bonds is due. The money is flowing into the 20-year government bond fund **TLT**.

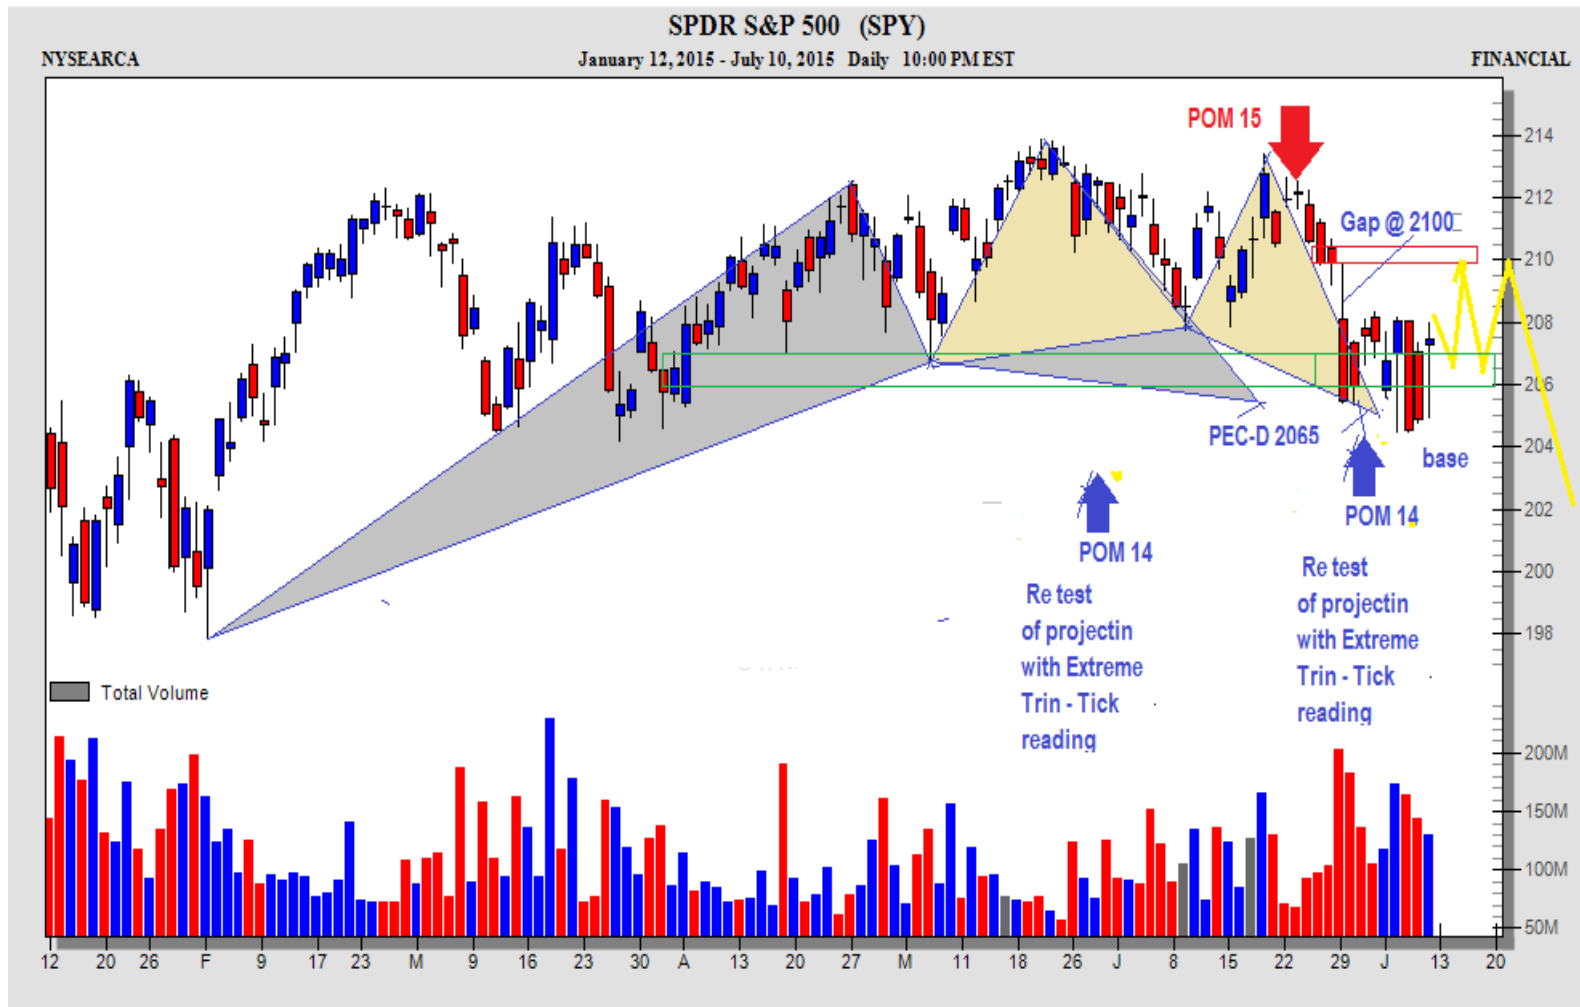

The re test of weekly **CZ of POM 13** is on lighter volume. TLT should rally soon.

# SPX- PEC- D Analysis - **Daily**

**Downside** – Downside target to PEC-D met @ 2061. It should rally up. Bottoming process in progress for short term

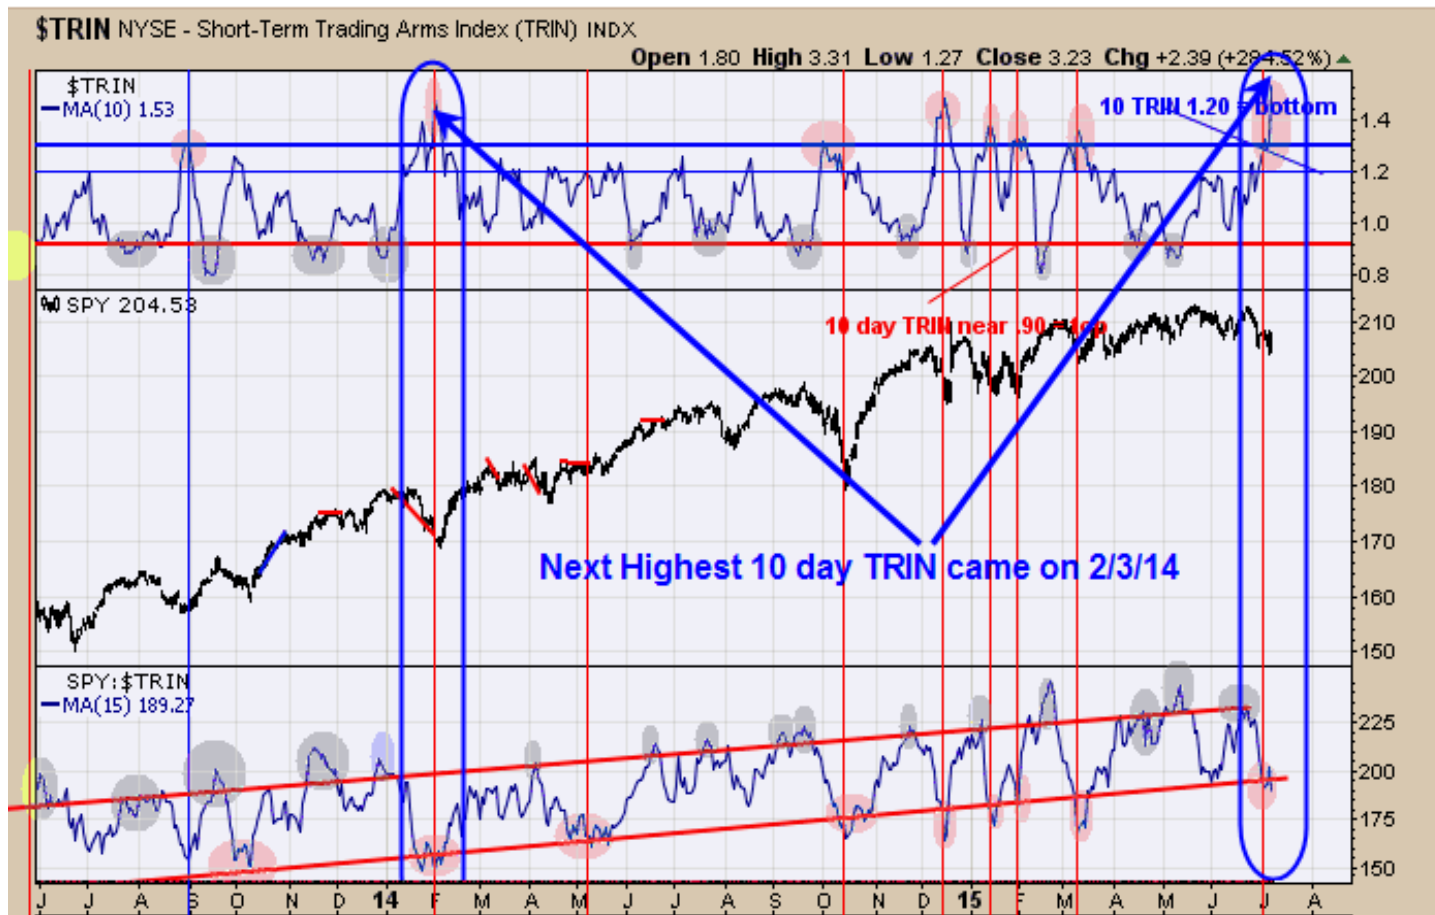

2<sup>nd</sup> ABC down to 2010 at later date.

**UPSIDE** – Another rally upside to 2100 to the gap.

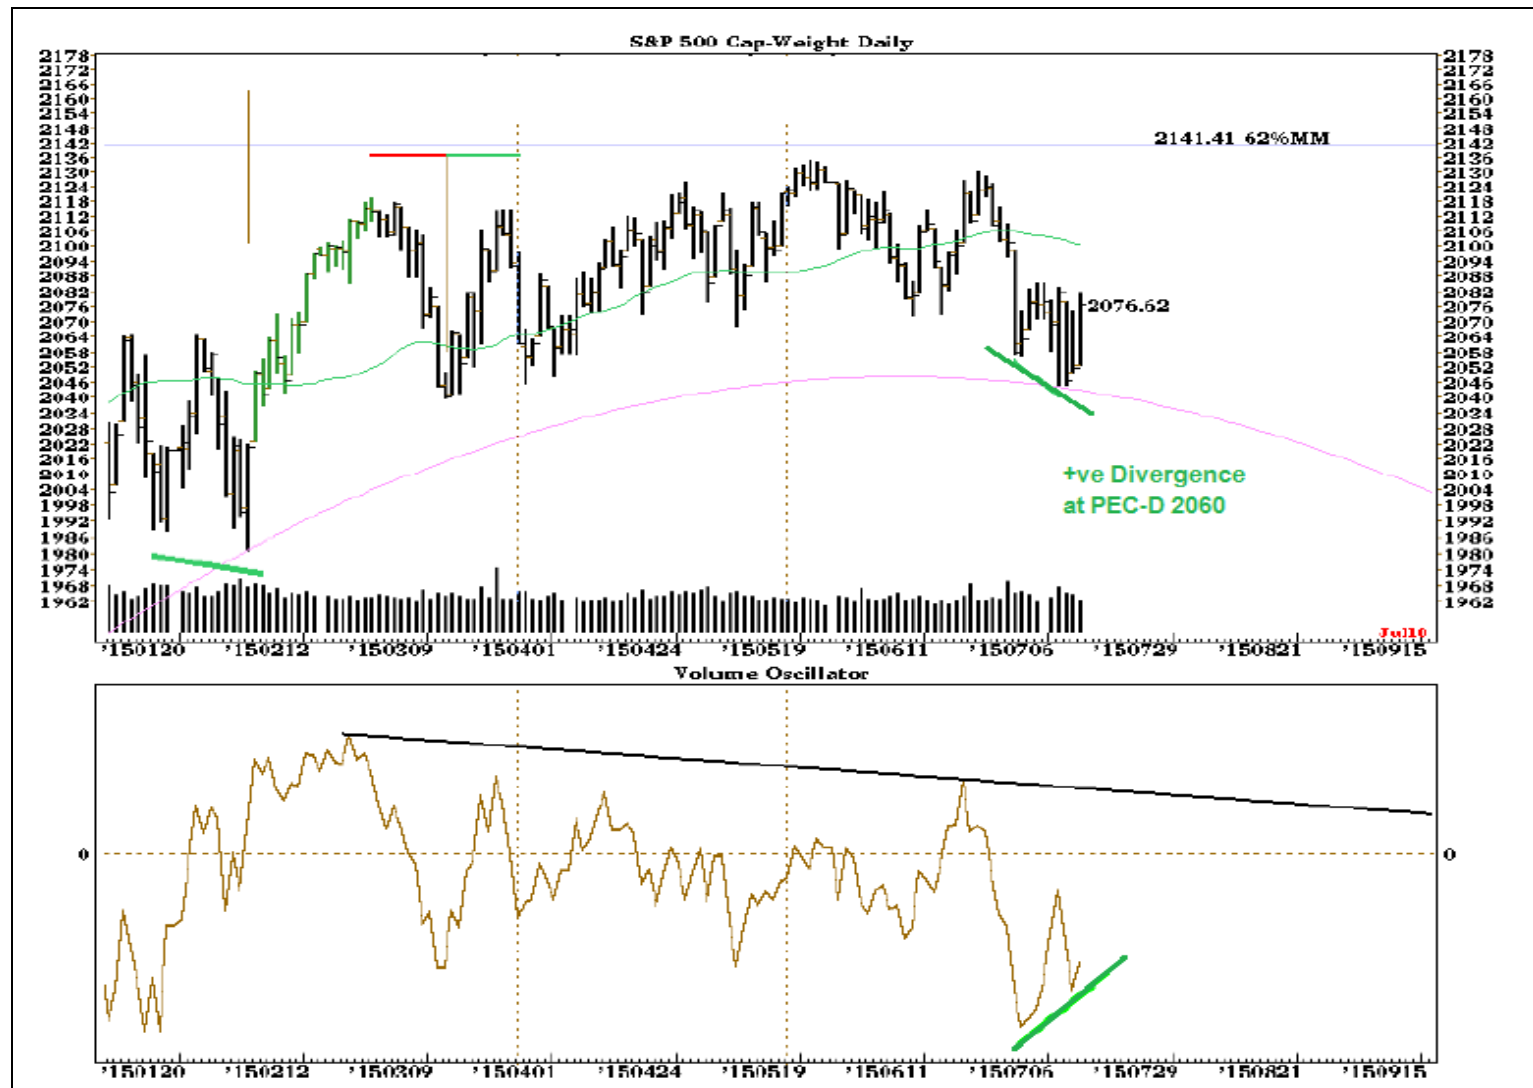

## SPX- TRIN – TICK Analysis -

Today the 10 day average of the TRIN came in at 1.53. Going back two years the last time the 10 day average of the TRIN was near this high came in February 3, 2014 with a reading of 1.47 which was a bottom. The 10 day TRIN help to find panic in the market with readings above 1.20 and the higher the reading the more secure the bottom. A time to worry is when the TRIN doesn't expand on a decline, which usually means the decline will continue. Today's TRIN closed at 3.23 and the highest yet on this bottoming pattern. This is very critical reading at the end of projection ABC down 2065. Which Triggered POM 14 and covered Net short.

# SPX- A-D Oscillator Analysis

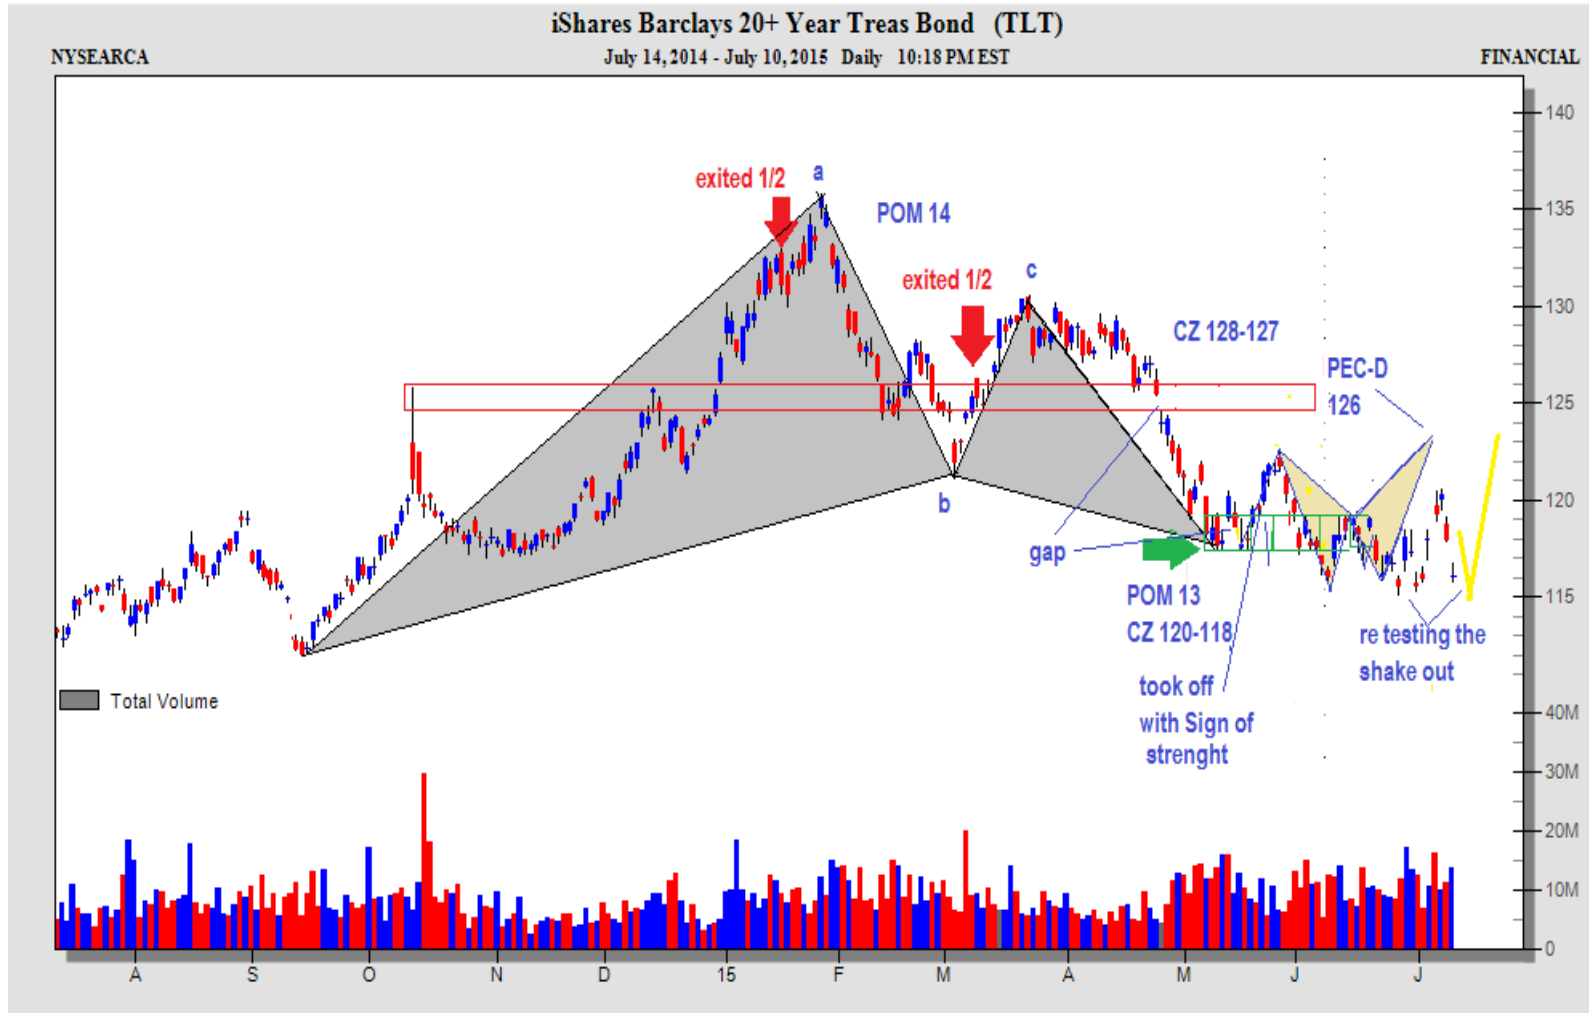

**Downside** – Downside target to PEC-D met @ 2060- poly trend. It should rally up as AD- oscillator shows positive divergence .

# TLT ( Bond ) – CZ- PEC- D Analysis - Daily

**Downside** – Bottom building process-ABC down to PEC-D 118 is extended to 116.5 with false break is being re tested.

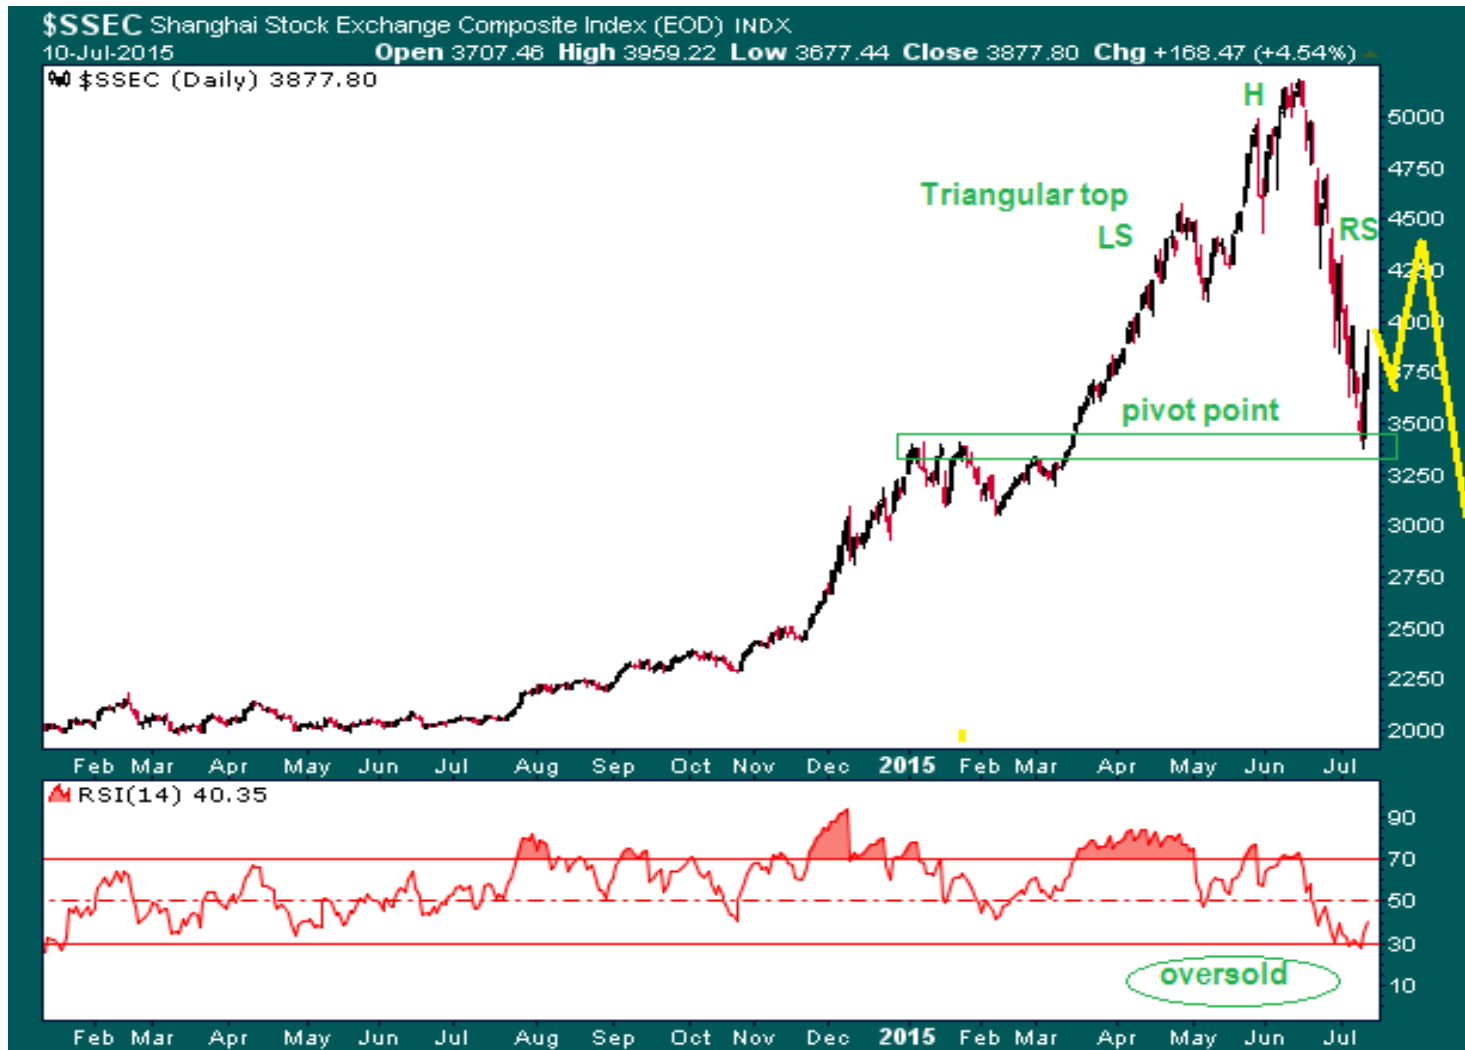

**Upside** – Rally to 1<sup>st</sup> Target CZ 128-126 –PEC-D 126.5

## SSEC Analysis - Daily

SSEC had retraced back to pivot point after putting in triangular top. This may determine the direction of U.S. stocks next week

## POM criteria for Implementation on SPX

- POM is rated from 10 to 15
- POM 14 , 15 ( is Sell Signal) and 12 , 11 ( is Buy Signal ) both are the Actionable Area whereas POM 13 is A Neutral Signal for Risk management
- On way UP move, POM 13 signifies to STOP executing additional “New Buys” that was initiated at POM 12 or POM 11 levels
- On way DOWN move, POM 13 signifies to STOP executing additional “ New Short Sells” that was initiated at POM 14 or POM 15 levels
- (Bear Markets) POM 15 is for - Net Short & POM 14 is for - Hedge Longs
- (Bull Markets) POM 15 is for -Hedge Longs & POM 14 is for - Partial Hedge
- POM 12 & 11 is for Net Long
- POM 10 is Climatic Crash low Buy Signal to add to Net long position (Rear event)

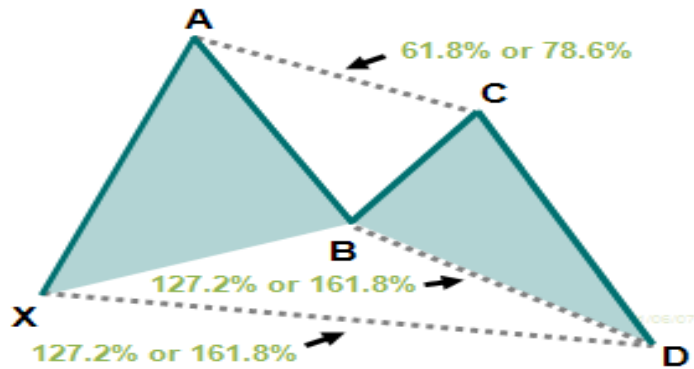

# Pythagoras Expansion / Contraction – (PEC) Model

- PEC Model is a 2<sup>th</sup> Derivative Timing Tool utilized on core currencies which identifies the turning point, for Tops and Bottoms on “Short & Intermediate term” Trend in the currency market.
- Methodology is based on Mathematical Pattern Recognition with Symmetrical Pythagoras Triangular expansion and contraction ( PEC) in concert with Price Oscillation ( POM) . This has a high probability for greater accuracy on Price projections at confluence when Integrated together.
- Once our POM analysis is complete, it will overlay PEC. The input signals are from tracking rolling Arithmetic Numerical series of Regression utilizing Fibonacci to Identify Triangular patterns of Expansion/ Contraction. Triangular pattern completes at the convergence of 2 separate Fibonacci extension levels and overlay Price Oscillation Model.
- Since the Currency has 2 dimensional pairs, PEC is critical to analyze with 2x2 Fibonacci streams to achieve confluence point D coinciding with POM

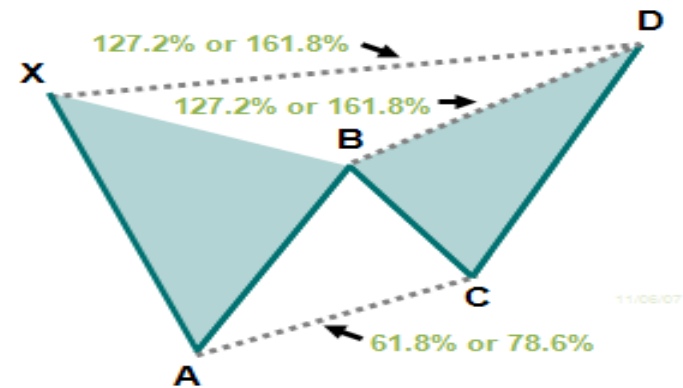

## PYTHAGORAS EXPANSION / CONTRACTION –(PEC) Model

The output signal of ABCD price moves preceded by a swing high or low (XA) generates projection point D, which is actionable point derived from 2 connecting triangles with convergence ratio. As with all geometric patterns, a Buy or Sell signal occurs as the pattern completes at point D

### Buy Pattern (bullish)

### Sell Pattern (bearish)
