Commodity Overview -

SIGNALS. - Price Projection CZ , Trading / Investment Conclusions below

Currently USD is in BLOW OFF MODE. This year Commodities have been decimated due to rally in DXY. We have pretty much stayed out of commodity camp during its decline except in GOLD and Mining BUT we have made profits in trading rally. LAST TRADE we have been stopped out at COST PRICE at 1185.

NATGAS (UNG) – M2M @ 14.5 Currently at 15.7. We shall hold it for cold winter rally.

OIL – No Position

News of the oversupply is known to everyone, and they were not told about the oversupply when the market was reaching a top. In the process, the Oil has moved down from 95 to 44 . We had sell signal at 95 for decline & Later sell at 65 for price target of 55 . Volume wise the counter trend rally is in progress but the rally should fail for next leg down.

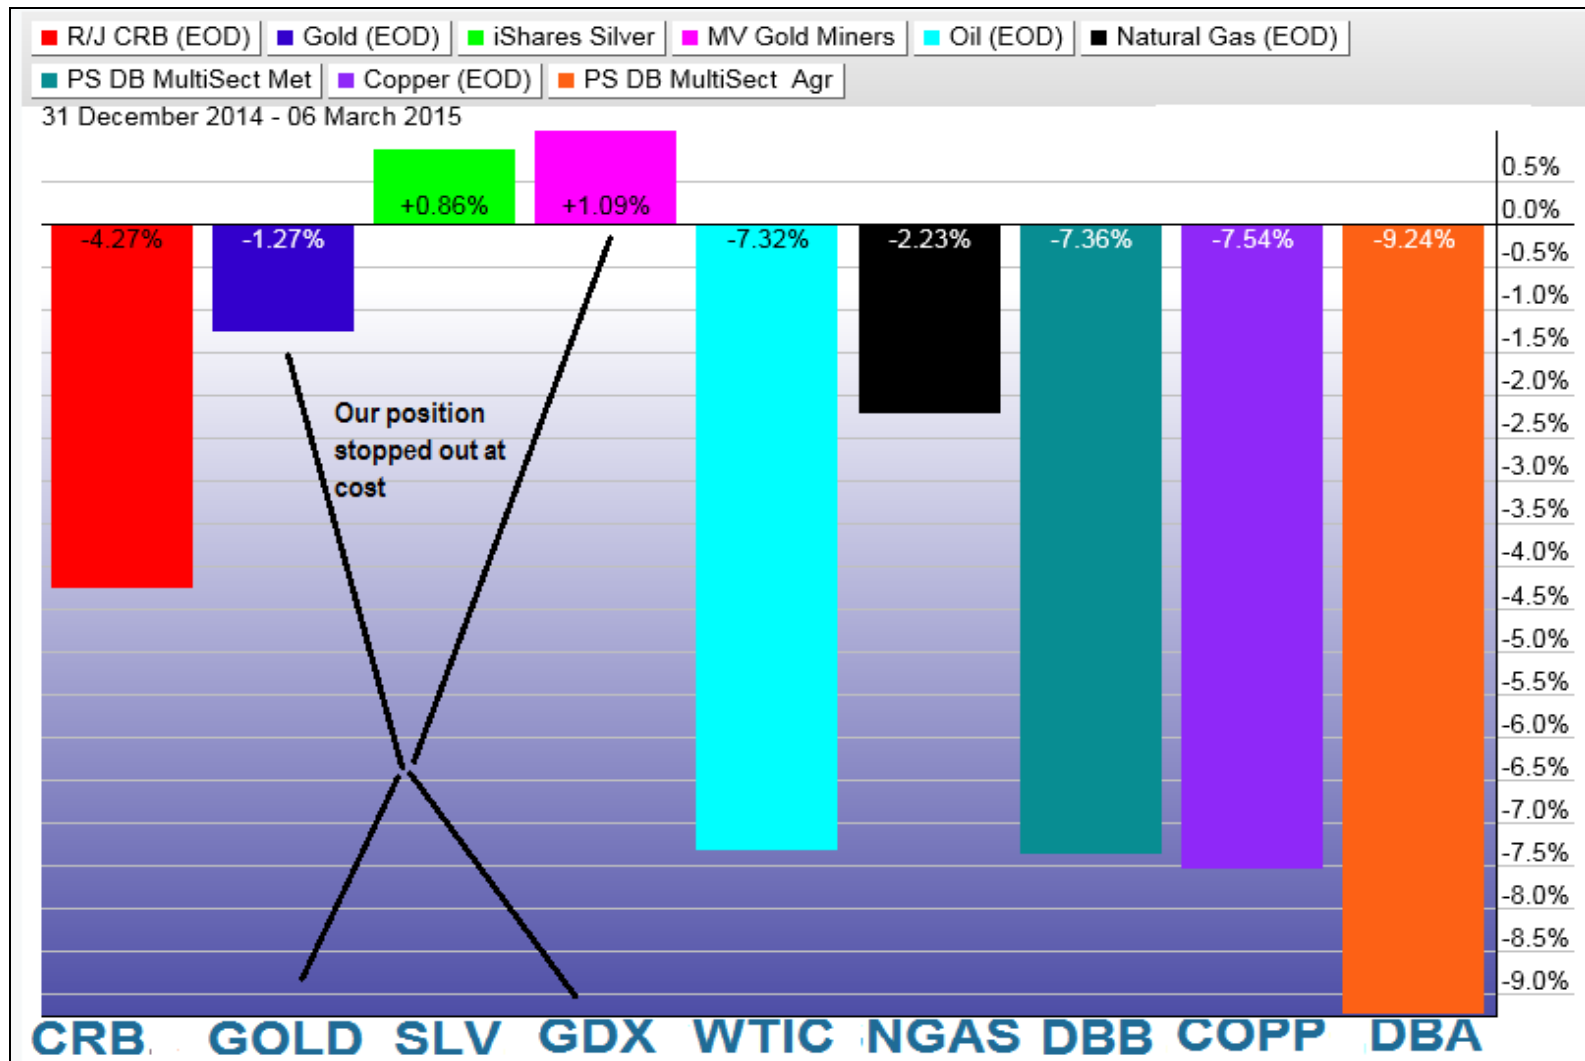

COPPER – No Position. 1-3-5 pattern target to 2.79 broke decisively to target 2.35. The bounce to limit to 2.78.

- BULLISH INDICES – **NONE**
- BEARISH INDICES- **NONE**
- NEUTRAL INDICES - **\$WTIC , COPPER**
_ **UNG - Bullish bias**

POM criteria for Implementation

- POM is rated from 10 to 15
- *POM 14 , 15 (is Sell Signal) and 12 , 11 (is Buy Signal) both are the Actionable Area whereas POM 13 is A Neutral Signal for Risk management*
- *On way UP move, POM 13 signifies to STOP executing additional ‘New Buys’ that was initiated at POM 12 or POM 11 levels*
- *On way DOWN move, POM 13 signifies to STOP executing additional “ New Short Sells” that was initiated at POM 14 or POM 15 levels*
- **(Bear Markets) POM 15 is for - Net Short & POM 14 is for - Hedge Longs**
- **(Bull Markets) POM 15 is for -Hedge Longs & POM 14 is for - Partial Hedge**
- *POM 12 & 11 is for Net Long*
- ***POM 10 is Climatic Crash low Buy Signal to add to Net long position (Rear event)***

Pythagoras Expansion / Contraction – (PEC) Model

- **PEC Model is a 2th Derivative Timing Tool utilized on core currencies which identifies the turning point, for Tops and Bottoms on “Short & Intermediate term” Trend in the currency market.**
- **Methodology is based on Mathematical Pattern Recognition with Symmetrical Pythagoras Triangular expansion and contraction (PEC) in concert with Price Oscillation (POM) . This has a high probability for greater accuracy on Price projections at confluence when Integrated together.**
- **Once our POM analysis is complete, it will overlay PEC. The input signals are from tracking rolling Arithmetic Numerical series of Regression utilizing Fibonacci to Identify Triangular patterns of Expansion/ Contraction. Triangular pattern completes at the convergence of 2 separate Fibonacci extension levels and overlay Price Oscillation Model.**
- **Since the Currency has 2 dimensional pairs, PEC is critical to analyze with 2x2 Fibonacci steams to achieve confluence point D coinciding with POM**

PYTHAGORAS EXPANSION / CONTRACTION –(PEC) Model

The output signal of ABCD price moves preceded by a swing high or low (XA) generates projection point D, which is actionable point derived from 2 connecting triangles with convergence ratio. As with all geometric patterns, a Buy or Sell signal occurs as the pattern completes at point D
