**GOLD :**

**Weekly close above 1255 will target 1290 very quickly to initiate a very large ABC up.**

Precious metal market is digesting the imbalances of Flash Crashes in Silver and Gold. It could be a fat finger trade or manipulation. CFTC is investigating the cause.

Geopolitical risk and uncertainty still remains, in time like this, Gold is not anyone's liability. The "fear trade" for low-to-negative Government bond yields is likely to continue to support gold, with rates still historically low and inflation in the 2% range, government bond yields are low to negative, in some cases,"

"Currently gold only represents 2% of China's foreign reserves. Compare that to the U.S. where gold represents 75%," there is still an enormous opportunity for China to continue to accumulate GOLD ."

**Silver is getting very attractive. The ratio has it 76:1. The long term mean is 55.**

**GDX**: pulled back into CZ 22.40-21.4 with lighter volume. It rejected the lows with Bullish Bottom. **Projected ABC up target to 24.5.**

Our recommended Gold stocks within senior miners group, **FNV, RGLD (both royalty stocks)** and SA within XAU and HUI have been leading the Indices higher.

GDX internals have turned Bullish. The Up / down Volume percent indicator which has made higher lows as GDX made Lower lows ; a bullish divergence (same condition for Advance/Decline percent- a bullish divergence). Both Indicators are now above 0 which is bullish.

GDX has made lower lows and the GDX/GLD ratio is matching its previous low showing GDX/GLD ratio is stronger than GDX which is bullish divergence. Volume needs to pick up soon for continuation move higher.

The monthly chart for GDX remains bullish. GDX rejected the pullback CZ 21.4-22.4.

# Appendix Content

- Objectives & POM /CZ / PEC –D Guidelines – Refer to detail Annexure
- POM – “ Price Oscillation Model “ Criteria
- PEC –D “ Pythagoras – Expansion & Contraction Criteria
- CZ- Confluence Zone Criteria
- TEXTURES – Bullish , Bearish , Neutral

## Critical backdrop Notes –

- *Price path Analysis is running commentary of the Market’s price behavior, Not a Trade Signal.*
- *Intermittent CZ’s are Short time out / Risk management for overweight position / rebalancing spots. Unless your own Portfolio objective demands.*
- *POM’s are Action points. Also at times Action points are at Main CZ’s when specifically announced Triggers.*
- *Model does not encourage Buying in between unless its false break upside or false break downside soon after POM / Main CZ Trigger and is specifically announced. Model stays with Trend POM to POM Signal.*

## POM criteria for Implementation on SPX

- POM is rated from 10 to 15
- POM 14 , 15 ( is Sell Signal) and 12 , 11 ( is Buy Signal ) both are the Actionable Area whereas POM 13 is A Neutral Signal for Risk management
- On way UP move, POM 13 signifies to STOP executing additional “New Buys” that was initiated at POM 12 or POM 11 levels
- On way DOWN move, POM 13 signifies to STOP executing additional “ New Short Sells” that was initiated at POM 14 or POM 15 levels
- **( Bear Markets) POM 15 is for - Net Short & POM 14 is for - Hedge Longs**
- **( Bull Markets) POM 15 is for -Hedge Longs & POM 14 is for - Partial Hedge**
- POM 12 & 11 is for Net Long
- POM 10 is Climatic Crash low Buy Signal to add to Net long position (**Rear event**)

# Pythagoras Expansion / Contraction – (PEC) Model

- PEC Model is a 2<sup>th</sup> Derivative Timing Tool utilized on core currencies which identifies the turning point, for Tops and Bottoms on “Short & Intermediate term” Trend in the currency market.
- Methodology is based on Mathematical Pattern Recognition with Symmetrical Pythagoras Triangular expansion and contraction ( PEC) in concert with Price Oscillation ( POM). This has a high probability for greater accuracy on Price projections at confluence when Integrated together.
- Once our POM analysis is complete, it will overlay PEC. The input signals are from tracking rolling Arithmetic Numerical series of Regression utilizing Fibonacci to Identify Triangular patterns of Expansion / Contraction. Triangular pattern completes at the convergence of 2 separate Fibonacci extension levels and overlay Price Oscillation Model.
- Since the Currency has 2 dimensional pairs, PEC is critical to analyze with 2x2 Fibonacci steams to achieve confluence point D coinciding with POM

## PYTHAGORAS EXPANSION / CONTRACTION –(PEC) Model

The output signal of ABCD price moves preceded by a swing high or low (XA) generates projection point D, which is actionable point derived from 2 connecting triangles with convergence ratio. As with all geometric patterns, a Buy or Sell signal occurs as the pattern completes at point D

### Buy Pattern (bullish)

### Sell Pattern (bearish)
