Market Overview SPX- BONDS

Portfolio: SPX - Year to date Gains - Up 3.3%. Our Macro- Long / Short Absolute returns Portfolio - Up 11.4% Profit (SPX, BONDS, GOLD excluding Gains from sampler Individual Equities and our currency calls) . We have Outperformed SPX by 3.5 times. During the same time frame Avg Stock Mutual Fund is up 3.1% and Hedge Fund Index up 3.9% as published by Bloom berg (1 Q) Performance 2017.

Net Short Signal (SPX) announced entry on 3/19 @ 2375. Currently SPX trading at 2325; Drop of 50 points. Gains in **Portfolio 2.1% Profit**

Net Long Signal (TLT) announced on 3/13 @ 118.25. Currently TLT trading at 123.5 ; Rise of 5 points (equates to 1000 points on Dow) . **Gains in Portfolio 4.5% Profit** . This is by far a huge gains in Debt Market in very short time.

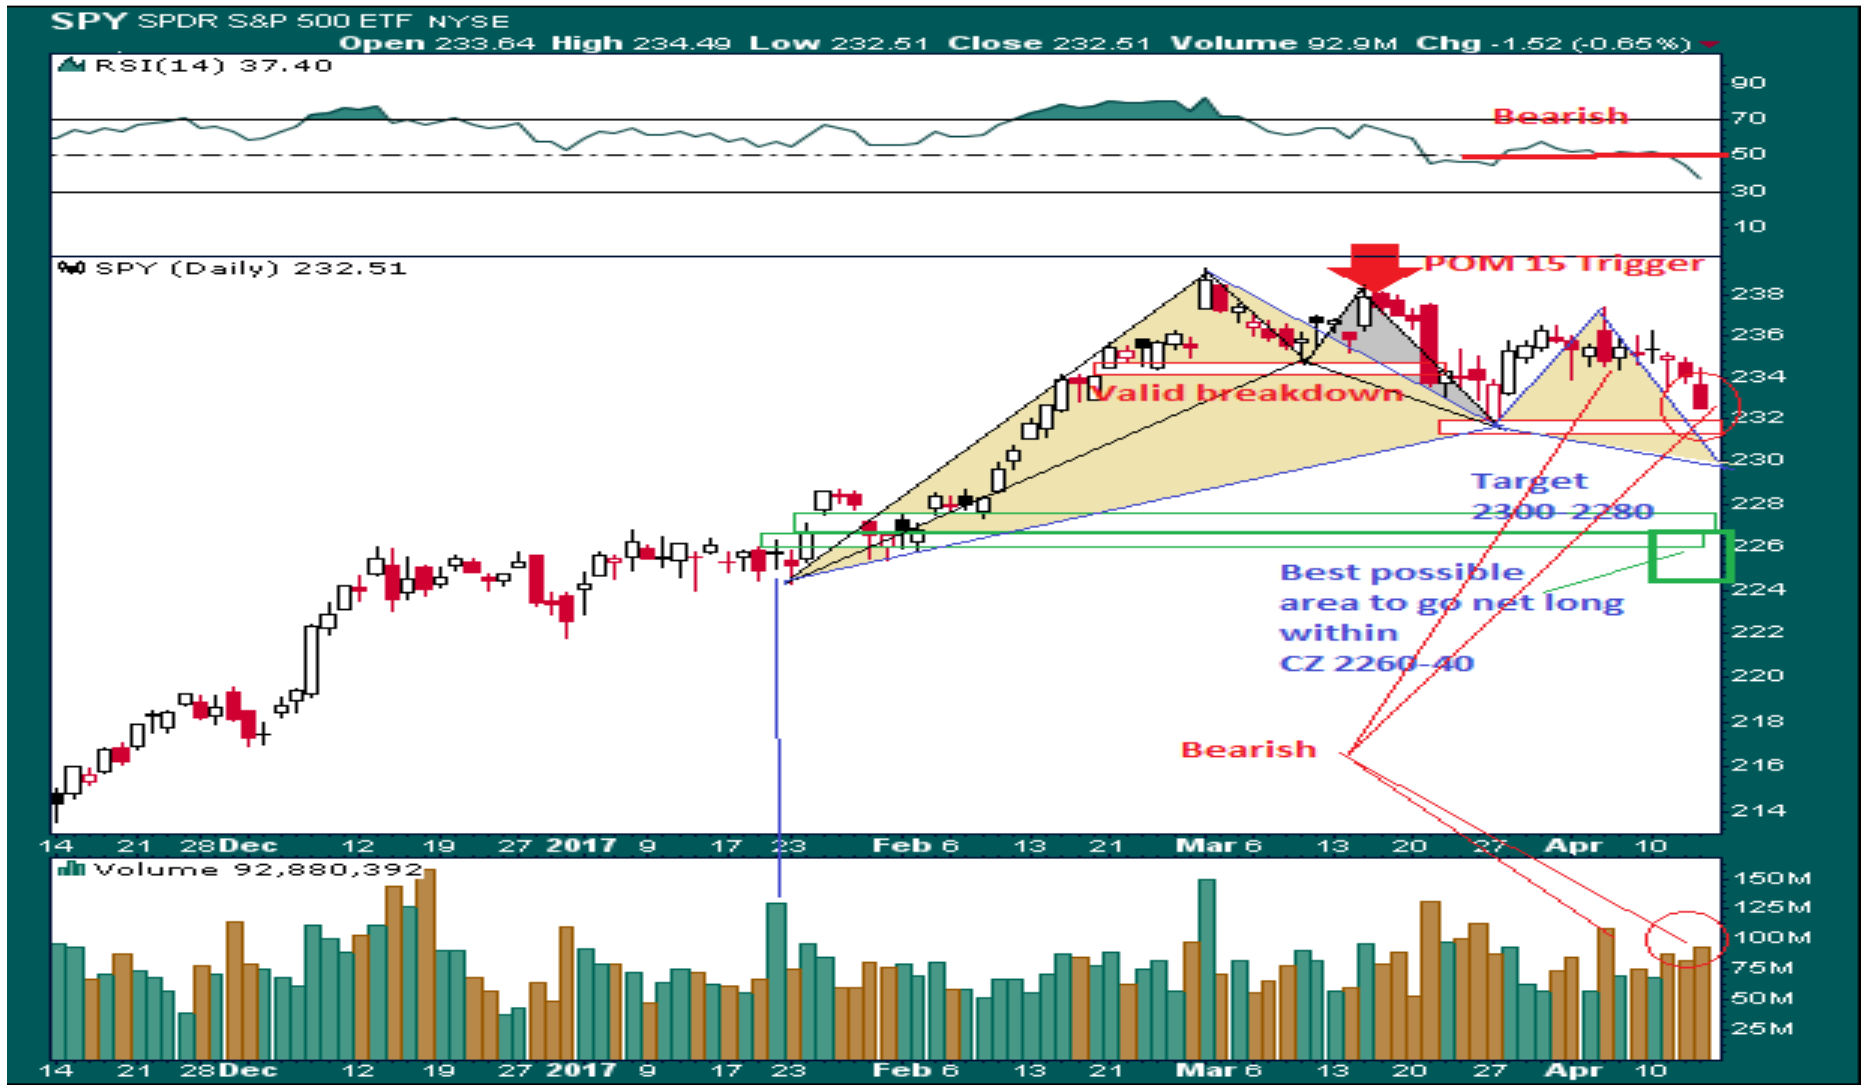

SPX: Our POM 15 Trigger – Net Short, hit right on the money after our announcement at 2375 and SPX had a good decline of 50 points. Our pull back target was at 2330-20 (MET **EXACT**). Upside bounce to 2375 should fail. We think the Top is in for the market at 2400. (Stop at 2410). On weekly basis, SPX is building a distribution pattern to move lower with multiple “Signs of weakness and escalated bearish volume.

NASD (Tech), SOX XLF – Financials are beginning to rollover. All acting these sectors very bearishly. Past week, Bank stocks could not rally on good news which may suggest a lot. Trump Rally since Nov 8 was led by Banks.

JPY : The Japanese yen's relationship to the greenback may be signaling a warning for stocks. We have signs here suggesting that risk-off is really starting to sink into the markets because in my opinion, yen always leads the markets in terms of risk-off sentiment. The fear first appears in the currency market and then "spreads" into the equity market.

SPY / Volume Analysis – C Z- PEC- D Daily –

TICK and VIX did not reach panic levels suggesting the pull back is not done. SPX produced an RSI below 50 and pushed the McClellan Oscillator below "0".

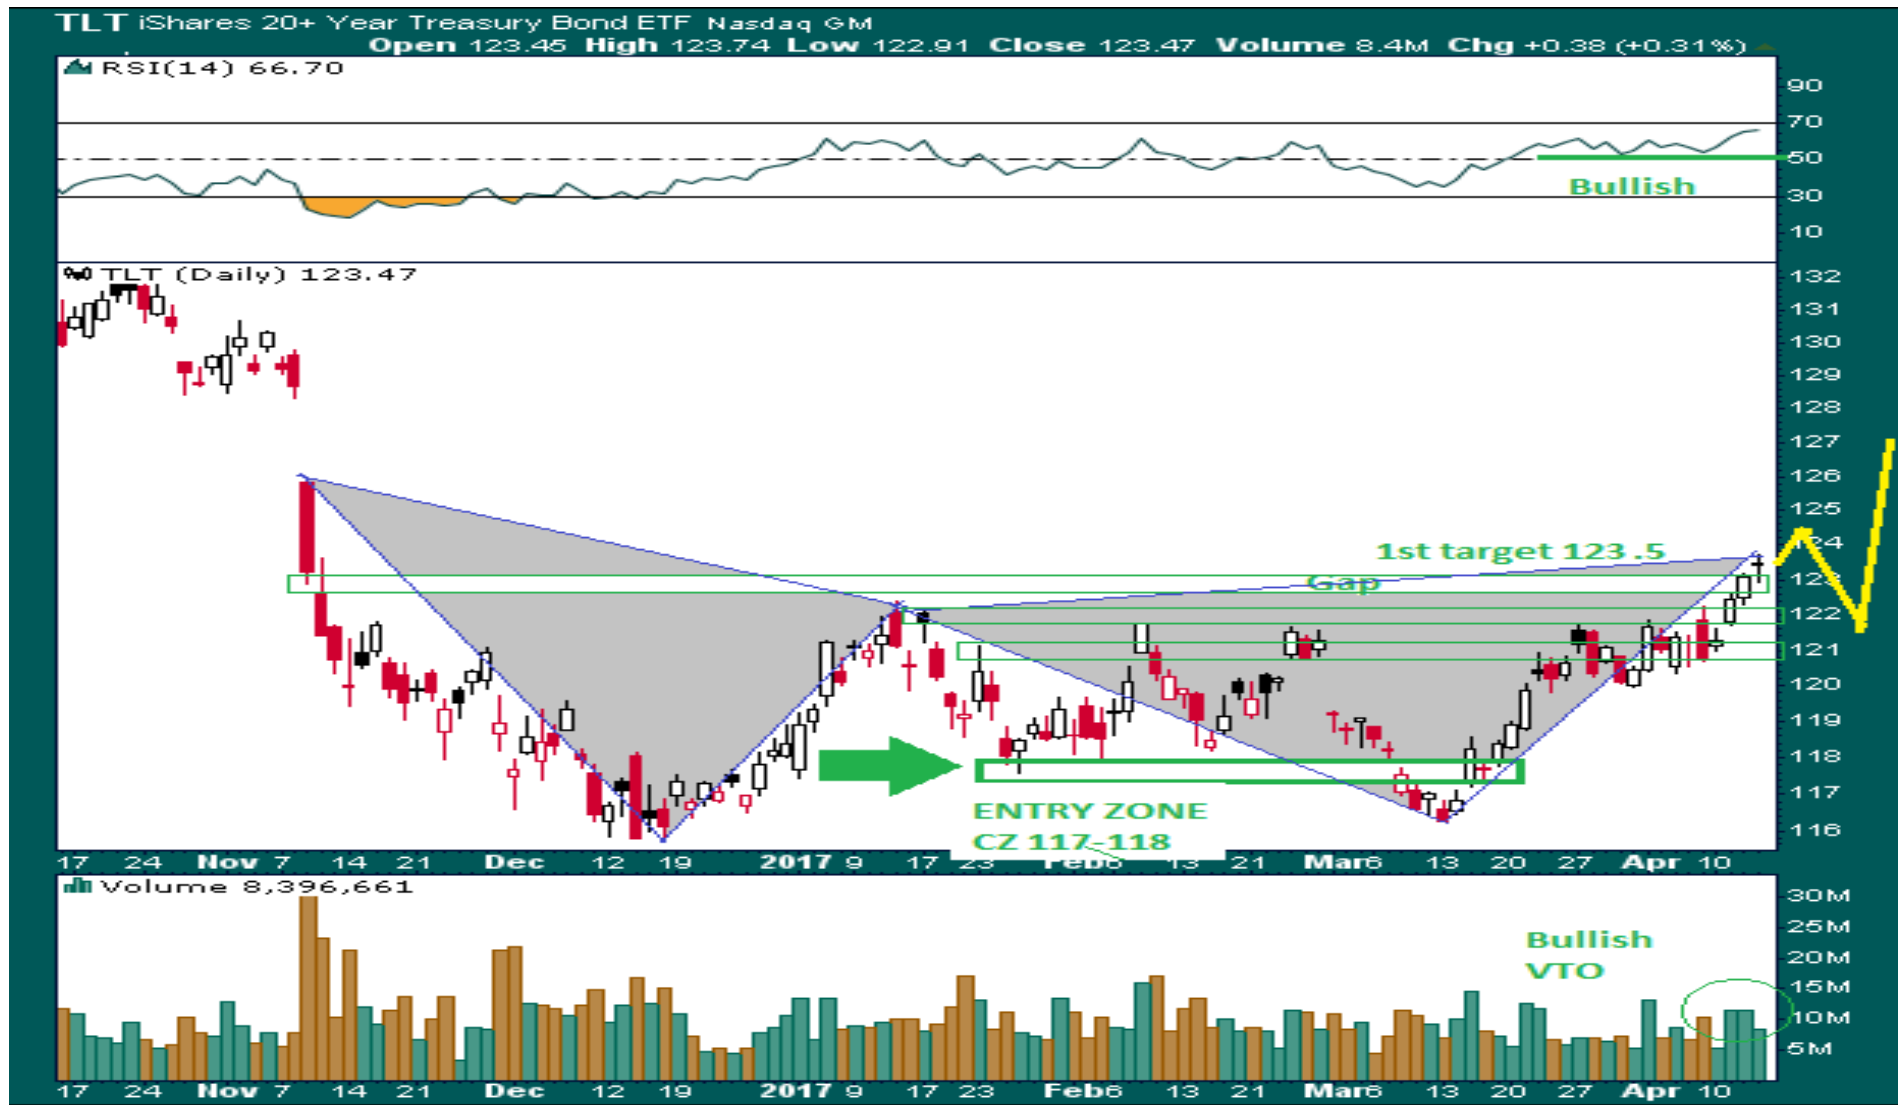

VIX/SPY Analysis – C Z- PEC- D Daily

SPY/VIX ratio is falling it shows that VIX is outperforming the SPY and a bearish condition for the market and decline is not done. The VIX rising above 15 for the first time since the election. So far, the rise in the VIX has been relatively mild, gradual pull back. It would have to climb above 20 (PEC-D 19) to signal a more serious stock correction.

POM criteria for Implementation on SPX

- POM is rated from 10 to 15
- POM 14 , 15 (is Sell Signal) and 12 , 11 (is Buy Signal) both are the Actionable Area whereas POM 13 is A Neutral Signal for Risk management
- On way UP move, POM 13 signifies to STOP executing additional “New Buys” that was initiated at POM 12 or POM 11 levels
- On way DOWN move, POM 13 signifies to STOP executing additional “ New Short Sells” that was initiated at POM 14 or POM 15 levels

Pythagoras Expansion / Contraction – (PEC) Model

- PEC Model is a 2th Derivative Timing Tool utilized on core currencies which identifies the turning point, for Tops and Bottoms on “Short & Intermediate term” Trend in the currency market.
- Methodology is based on Mathematical Pattern Recognition with Symmetrical Pythagoras Triangular expansion and contraction (PEC) in concert with Price Oscillation (POM) . This has a high probability for greater accuracy on Price projections at confluence when Integrated together.
- Once our POM analysis is complete, it will overlay PEC. The input signals are from tracking rolling Arithmetic Numerical series of Regression utilizing Fibonacci to Identify Triangular patterns of Expansion / Contraction. Triangular pattern completes at the convergence of 2 separate Fibonacci extension levels and overlay Price Oscillation Model.
- Since the Currency has 2 dimensional pairs, PEC is critical to analyze with 2x2 Fibonacci steams to achieve confluence point D coinciding with POM

PYTHAGORAS EXPANSION / CONTRACTION –(PEC) Model

The output signal of ABCD price moves preceded by a swing high or low (XA) generates projection point D, which is actionable point derived from 2 connecting triangles with convergence ratio. As with all geometric patterns, a Buy or Sell signal occurs as the pattern completes at point D

Buy Pattern (bullish)

Sell Pattern (bearish)
