Paul Tutor Jones study just released last week indicates the Ratio of Wilshire 5000 v/s GDP at historical extreme levels.

SPX: Our POM 15 Trigger – Net Short Trigger @ 2375 on 3/19.

On weekly basis, **SPX** is building a distribution pattern to move lower with multiple “Signs of weakness and escalated bearish volume. **On Balance Volume** has fallen to the lowest level in more than two months.

SPY/VIX ratio is falling is falling bearishly which is bearish condition for the market. **JPY** move is signaling a warning for stocks. We have signs here suggesting that risk-off is really starting to sink into the markets. **Yen** has always led the markets in terms of risk-off sentiment past 20 years.

Market may remain “Sloppy” in April before extremes start to register to signal the next trend. PUT / CALL Ratio did not reach panic levels suggesting the pull back is not done. The McClellan Oscillator below “0”.

SPY / Volume Analysis – C Z- PEC- D Daily –

The **On Balance Volume** has fallen to the lowest level in more than two months. The falling OBV line reflects the fact that downside volume over the last month has been heavier than upside volume. That usually suggests that prices will also fall further.

SPY / PUT /CALL/TICK/ MC -OSC Analysis – C Z- PEC- D Daily –

Total Put/Call ratio reaches $< .75$ the market is usually near a short term high. Market did rally to despite the bearish Total Put/Call reading. Normally option expiration week has a bullish bias and could be the reason market was up Thursday / Friday. TICK and TRIN combination past week does not produce worthwhile rallies. The McClellan Oscillator closed is still below 0.

TLT / Volume Analysis – C Z- PEC- D Daily

The **On Balance Volume** has risen to the highest level in 3 months . The rising OBV line reflects the fact that upside volume over the last month has been heavier than downside volume. That usually suggests that prices will also rise further.

POM criteria for Implementation on SPX

- POM is rated from 10 to 15
- POM 14 , 15 (is Sell Signal) and 12 , 11 (is Buy Signal) both are the Actionable Area whereas POM 13 is A Neutral Signal for Risk management
- On way UP move, POM 13 signifies to STOP executing additional “New Buys” that was initiated at POM 12 or POM 11 levels
- On way DOWN move, POM 13 signifies to STOP executing additional “ New Short Sells” that was initiated at POM 14 or POM 15 levels
- (Bear Markets) POM 15 is for - Net Short & POM 14 is for - Hedge Longs

Pythagoras Expansion / Contraction – (PEC) Model

- PEC Model is a 2th Derivative Timing Tool utilized on core currencies which identifies the turning point, for Tops and Bottoms on “Short & Intermediate term” Trend in the currency market.
- Methodology is based on Mathematical Pattern Recognition with Symmetrical Pythagoras Triangular expansion and contraction (PEC) in concert with Price Oscillation (POM) . This has a high probability for greater accuracy on Price projections at confluence when Integrated together.
- Once our POM analysis is complete, it will overlay PEC. The input signals are from tracking rolling Arithmetic Numerical series of Regression utilizing Fibonacci to Identify Triangular patterns of Expansion / Contraction. Triangular pattern completes at the convergence of 2 separate Fibonacci extension levels and overlay Price Oscillation Model.
- Since the Currency has 2 dimensional pairs, PEC is critical to analyze with 2x2 Fibonacci steams to achieve confluence point D coinciding with POM

PYTHAGORAS EXPANSION / CONTRACTION –(PEC) Model

The output signal of ABCD price moves preceded by a swing high or low (XA) generates projection point D, which is actionable point derived from 2 connecting triangles with convergence ratio. As with all geometric patterns, a Buy or Sell signal occurs as the pattern completes at point D

Buy Pattern (bullish)

Sell Pattern (bearish)
