Market Overview GOLD

US Fiscal Budget for 2018 to be released Tuesday and the minutes of the FOMC meeting to be released Wednesday, this should result in volatility within the Currency market. New Moon and Perigee Cycle is on May 25, it too has the history of high volatility.

USD: USD soared after the election on the prospect that lower taxes, fiscal stimulus, and deregulation would boost the U.S. economy. But that USD trade has reversed completely. (Refer chart below)

We Triggered Sell Signal in USD at 102; the downside projection target to 96 is approaching.

Dollar drop and rally in European currencies due to improving economic conditions in the Eurozone and uptick in inflation are supporting that currency. **GBP** rising in optimism in the UK economy. The falling dollar, is giving a lift to commodities and Gold. If Geo- political Crisis increases around the world, GOLD will once again be perceived as hard currency. Silver has lagged in this move, it is still considered as industrial metal in this run based on investors perception

GOLD ; GOLD triggered reentry at PEC-D 1245 within pull back zone CZ 1235-60. Close above 1265 on weekly basis should be Bullish to continue higher, If not GOLD can pull back one more time to CZ 1250-40 and then rally up

The longer term view for GOLD is Bullish. The bottom of 8 year cycle came in December 2016 at 1050 (our main core entry point).

GDX ; GDX/GLD ratio leads the way for GDX, and GDX/GLD ratio is weaker. Last Thursday GDX gapped down and produced a "Sign of Weakness" (decline on large volume) and short term bearish sign. On today's trading, last Thursday's gap was tested on lighter volume suggesting a pullback only if GOLD fails to break above 1265 this week. RSI is above 50 which is Bullish. Pull back to 22.75-22.5 and then rally up

The monthly chart for GDX remains bullish. GDX rejected the back CZ 21.4-22.4 as expected.

Pythagoras Expansion / Contraction – (PEC) Model

- PEC Model is a 2th Derivative Timing Tool utilized on core currencies which identifies the turning point, for Tops and Bottoms on “Short & Intermediate term” Trend in the currency market.
- Methodology is based on Mathematical Pattern Recognition with Symmetrical Pythagoras Triangular expansion and contraction (PEC) in concert with Price Oscillation (POM) . This has a high probability for greater accuracy on Price projections at confluence when Integrated together.
- Once our POM analysis is complete, it will overlay PEC. The input signals are from tracking rolling Arithmetic Numerical series of Regression utilizing Fibonacci to Identify Triangular patterns of Expansion / Contraction. Triangular pattern completes at the convergence of 2 separate Fibonacci extension levels and overlay Price Oscillation Model.
- Since the Currency has 2 dimensional pairs, PEC is critical to analyze with 2x2 Fibonacci streams to achieve confluence point D coinciding with POM

PYTHAGORAS EXPANSION / CONTRACTION –(PEC) Model

The output signal of ABCD price moves preceded by a swing high or low (XA) generates projection point D, which is actionable point derived from 2 connecting triangles with convergence ratio. As with all geometric patterns, a Buy or Sell signal occurs as the pattern completes at point D

Buy Pattern (bullish)

Sell Pattern (bearish)
