Additional direction bias is given via doubling on ETF's with extremes SD # 2 & POM conditions.

The Focus is to derive and compare the Relative performance of various Sector ETFs via using Standard Deviation (SD) Criteria, POM – SPX Methodology as a PIVOT point for start then use with SECTOR / SPX Ratio chart for their “Pattern Recognition and Technical Analysis” for OVERVALUATION AND UNDERVALUATION of Sectors.

Step 1 – *Qualify the Sector based on Correlation Ratio Analysis with SPX to determine Standard Deviation (SD # 1.5 to 2) @ extremes level to define “Overvaluation and Undervaluation” of the SECTOR*

Step 2 - *Overlay this Correlation input data on Sector's Relative strengths based on the SPX –POM latest STATUS as Pivot point to measure Maximum and Minimum strength of the Sector. Validate those ideas via technical Patterns of absolute Charts & SPX Ratio charts of these Sectors for Bullish and Bearish SETUPS via Pattern Recognition, Technical Analysis via second derivative DMA's*

MUB – Correlation Ratio Analysis with SPX – 365 days Time basis

SD # 2.0 has just reached extremes

MUB – 3 Yrs - Technical & Pattern Analysis –

It came into the CZ right on the nose 97-98 but the volume is heavy, we should get the test of the lows again which might be the secondary test. However we had a climax volume at the first lows

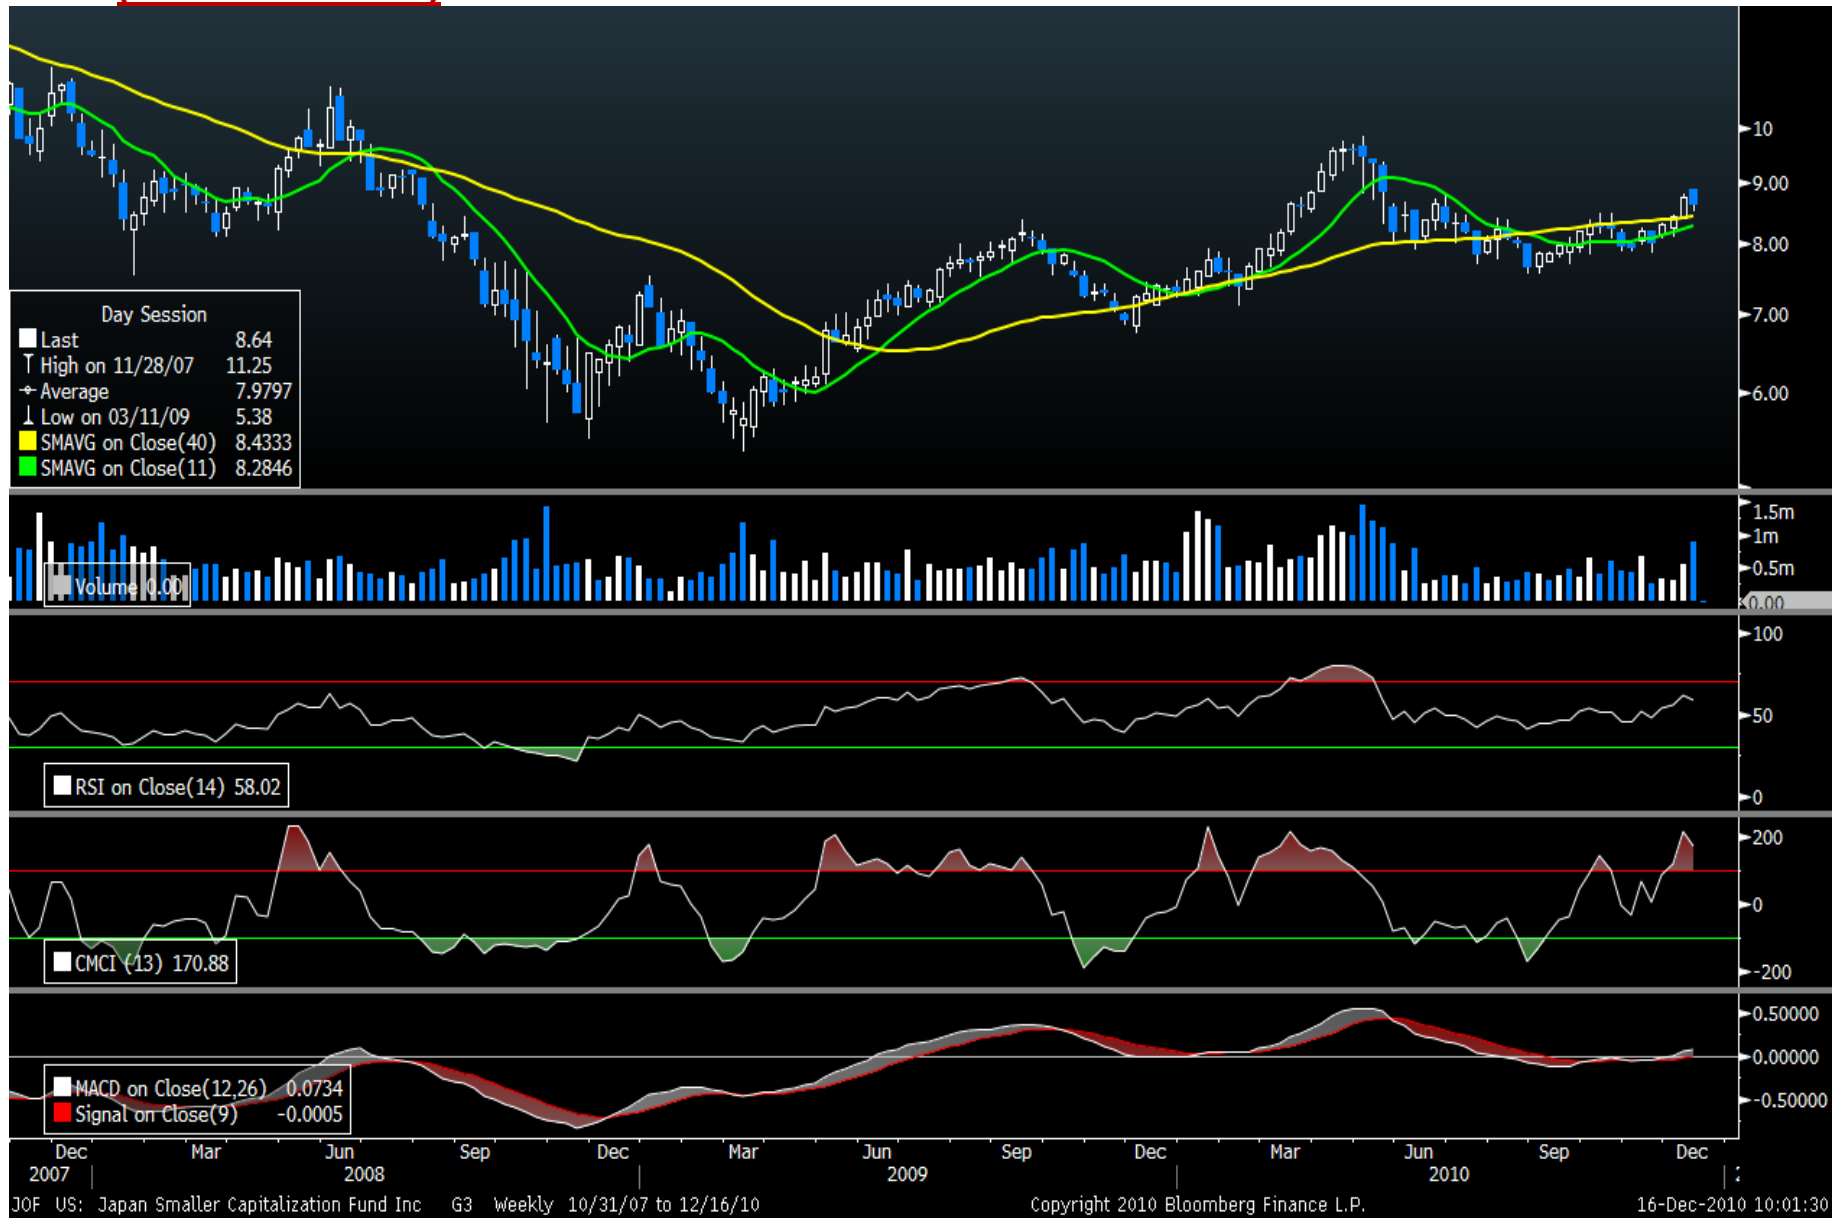

MUB – Technical & Pattern Analysis –

Currently very oversold. SD is at - 2.0 undervalued. **In fact this is classic example of how the high volume reversal gets tested after the bounced** . We went in the CZ 97-98 at 600K v/s 350k volume , suggest the bottom of CZ should be tested again if rejected with volume at 450k and close above 99 should give a bullish signal . RSI has diverged bullishly on the 2nd re test , this is bullish as well we will move this in our PQV report with CZ in the PQV Validated watch list , this is slow moving but may get some Yield with it (Stop outside CZ)

Long SMH Equity and Short SPX Index, Updated till 15 Dec 2010

1- SMH – Technical & Pattern Analysis & Price / Volume (**No Change – No test**)

SMH came very close to our test zone defined by May 08 at 34 and breakdown area of Jan 08 of 33 as this would depend on SPX failure. There is a possibility, if SPX fails, then we look for SHM to fail as well and CZ might not get tested . CZ for SMH is 34 -36 and volume on test to be 8M and close below 34 . That would Top , On risk reward as always the stop on other side of CZ.

SMH– Technical & Pattern Analysis –

The SMH / SPX ratio chart looks bearish and should trend down in RH side chart below, confirms the relative fall in SMH / SPX (hence overvalued) by this matrix in Sync with SD Analysis.
