1 – SLV- Technical & Pattern Analysis

The SLV / SPX ratio chart looks bearish and should trend down in RH side chart below, confirms the relative fall in SLV / SPX (hence overvalued) by this matrix in Sync with SD Analysis.

1- SLV – Technical & Pattern Analysis & Price / Volume

On 9th Nov, commodity report we had POM 15 at 27. Bearish pattern with last engulfing, and climax volume (Climax volume doesn't not have to get tested), Then selloff began to our 1st level to 24 (Trend line, 21 D MA) on higher volume, Now bounce is in progress and could test the gap of breakdown / hanging man under 27, if on lighter volume should be another failure. (Volume on bounce appear much lighter)

2- SLV – Technical & Pattern Analysis & Price / Volume

Bearish consolidation is in progress, the bounce could be under the lower side of trend line. The base of the consolidation is LEVEL 2 at 23. The rise in SLV from 23 to 28 has been on Diverging RSI as seen in chart below.

On bigger scale , As indicated last week SLV broke 20 on higher volume along with previous 2 occasion hit the swing on high volume suggests that 20 (level 3) could stop the fall below , that should be a equilibrium (Mid term) target

SLV - On Hourly chart , the short term bounce could take us under 27 in the gap as indicated. On hrly volume appears lighter
