## Research Note – Sector – ETF Analysis (D )

**MAEG – WKLY SECTOR ETF ANALYSIS SG 2010 # OCT 29**

**For Immediate Release – *Friday AM (EST)***

## Daily SPX - “ Trend Adjusted Signal”

- **3x3 /9EMA – Break Indicator – On Buy Signal since SPX - 1115**

*The process utilizes the cumulative Algorithm of price trails 3x3 / 9EMA input signals for Trend formation. This signal tends to work well in Market extensions (i.e. Post POM 14). Currently this signal has been on Long side since SPX @ 1115 (Mid – September)*

Sym	Posn	Close	Reversal
DJ	Long	11115.8	10982.2
NYA	Short	7504.85	7571.1
SPX	Long	1183.71	1178.1

*This Methodology is implemented by Program Traders especially in Momentum extensions and diagonal triangle formation Trend-following system which bases its reversal signals on breaking a significant closing Break Indicator I to confirm the new trend. ( it's important to use a stop if you act on a signal). The reversal price is generated on the close of a bar. (The drawback of strategy is that it can whip saw). **( We will have a daily coverage on this Trend adjusted strategy).***

*We will cover NYA for some time, since its been giving us good signal on Bond Market which has been quite critical past several months ( as covered in our Report yesterday). Currently this Index has reversed, may be due to selloff in Bond market*

## Review Process(2)-Select Sector “ Best & Worst “ on TREND Analysis

**This weeks - Crirical point for 1<sup>st</sup> Jan PIVOT. – YTD**

- **SPX Comparisons – From 1<sup>st</sup> Jan @ 1115 to current 1178**

*For Trend Analysis, our reference point for pivot still remains as 1<sup>st</sup> of January due to two reasons. First, Money managers tends to chase the sectors that has performed well YTD in the closing stages. Second, the seasonality being positive in last two months. By 31<sup>st</sup> Dec the 365 Day Correlation t and the Trend correlation will converge.*
